I90S6, I50B6, I70B6, I90B6, I70P6, I90P6, 200P6, 200VV6, 230VV5

Product highlights

Monitor security management

Monitor security management reduces theft risks through active security measures both from server and monitor firmware.

Monitor power management

Monitor power management reduces unnecessary power consumption from a number of unattended monitors without generating additional staff expenses or operating costs.

Real-time asset reports

Web-based asset reports can be retrieved in real time by IT administrators.

Real-time message distribution

Real-time message distribution enhances communications by delivering messages directly to monitor users' screens.

Performance management

Performance management allows end users to adjust monitor performance and settings through local software interface, and also provides the designated administrator with the ability to reset all or selected monitors to factory default settings at the same time.

Expandability

Expandability provides the flexibility to grow a system through integrating SmartManage with mainstream asset management solutions and other well-known systems (such as Altiris Asset Management Suit, Dell OMCA, HP Client Management) when organisation requirements change.

Asset tracking

Asset tracking collects and stores information including user name, monitor name, location code, serial number, asset number, purchase date, cost codes, cost centre code, running hours, size and resolution, manufacturing date, security status, on-line status and custom information for tracking/auditing reports to meet internal management requirements.
